

The updated Škoda Scala & Kamiq

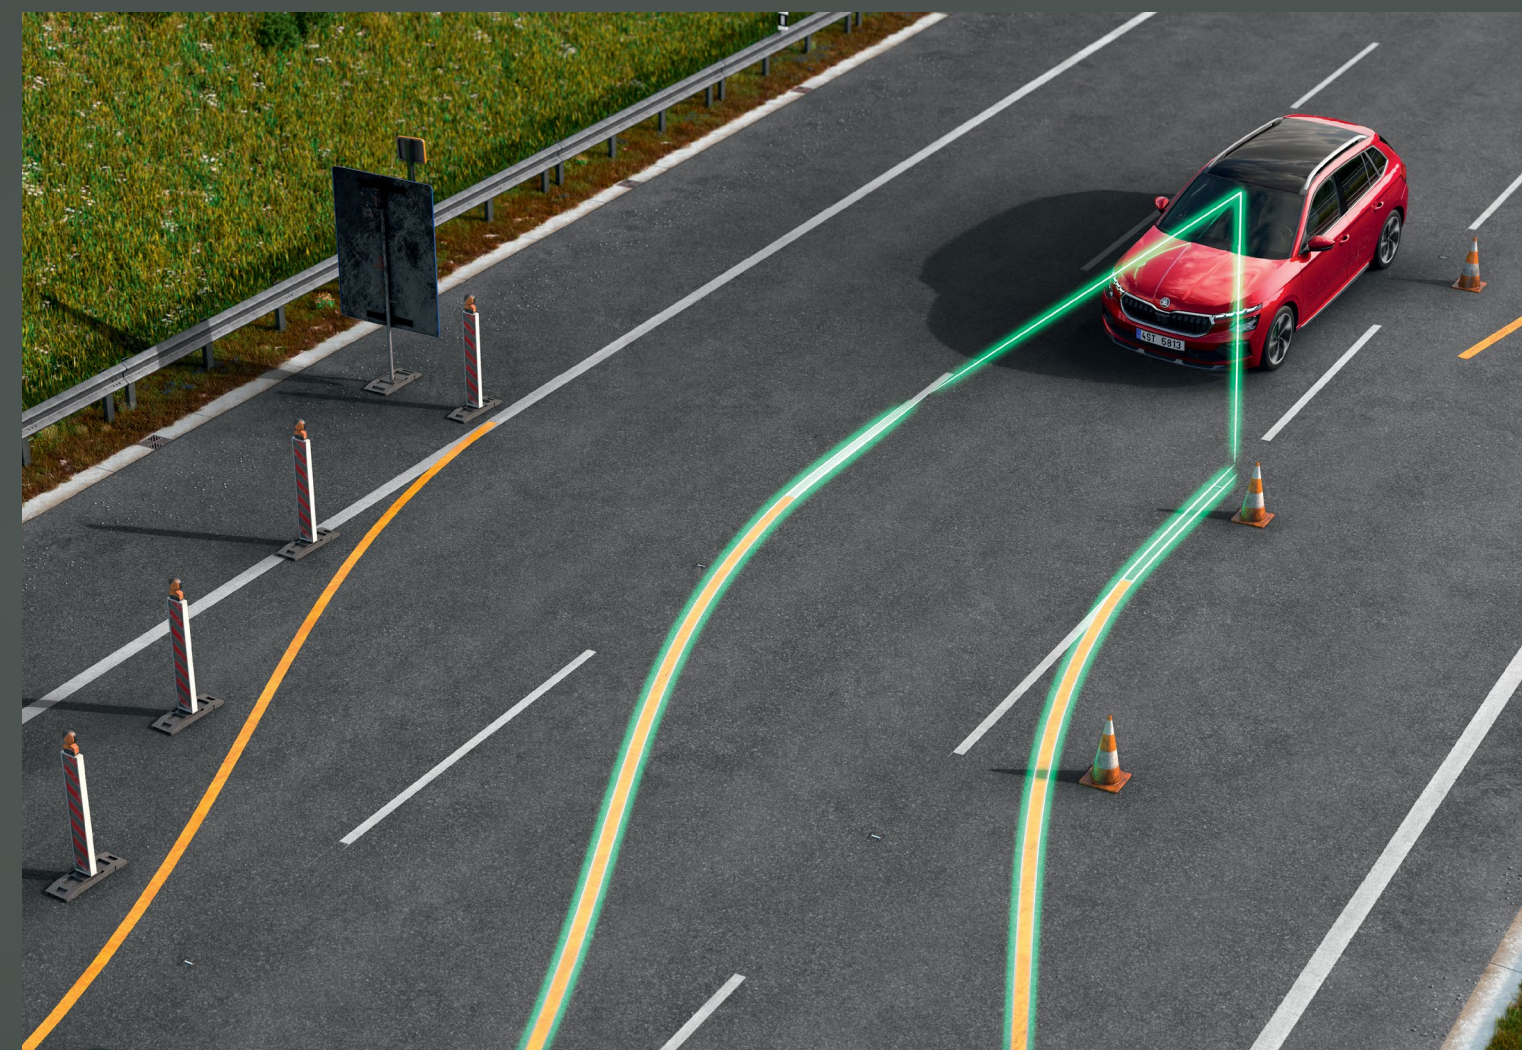

Available safety features

Travel Assist integrates: Predictive Adaptive Cruise Control, Adaptive Lane Assist and optionally Side Assist

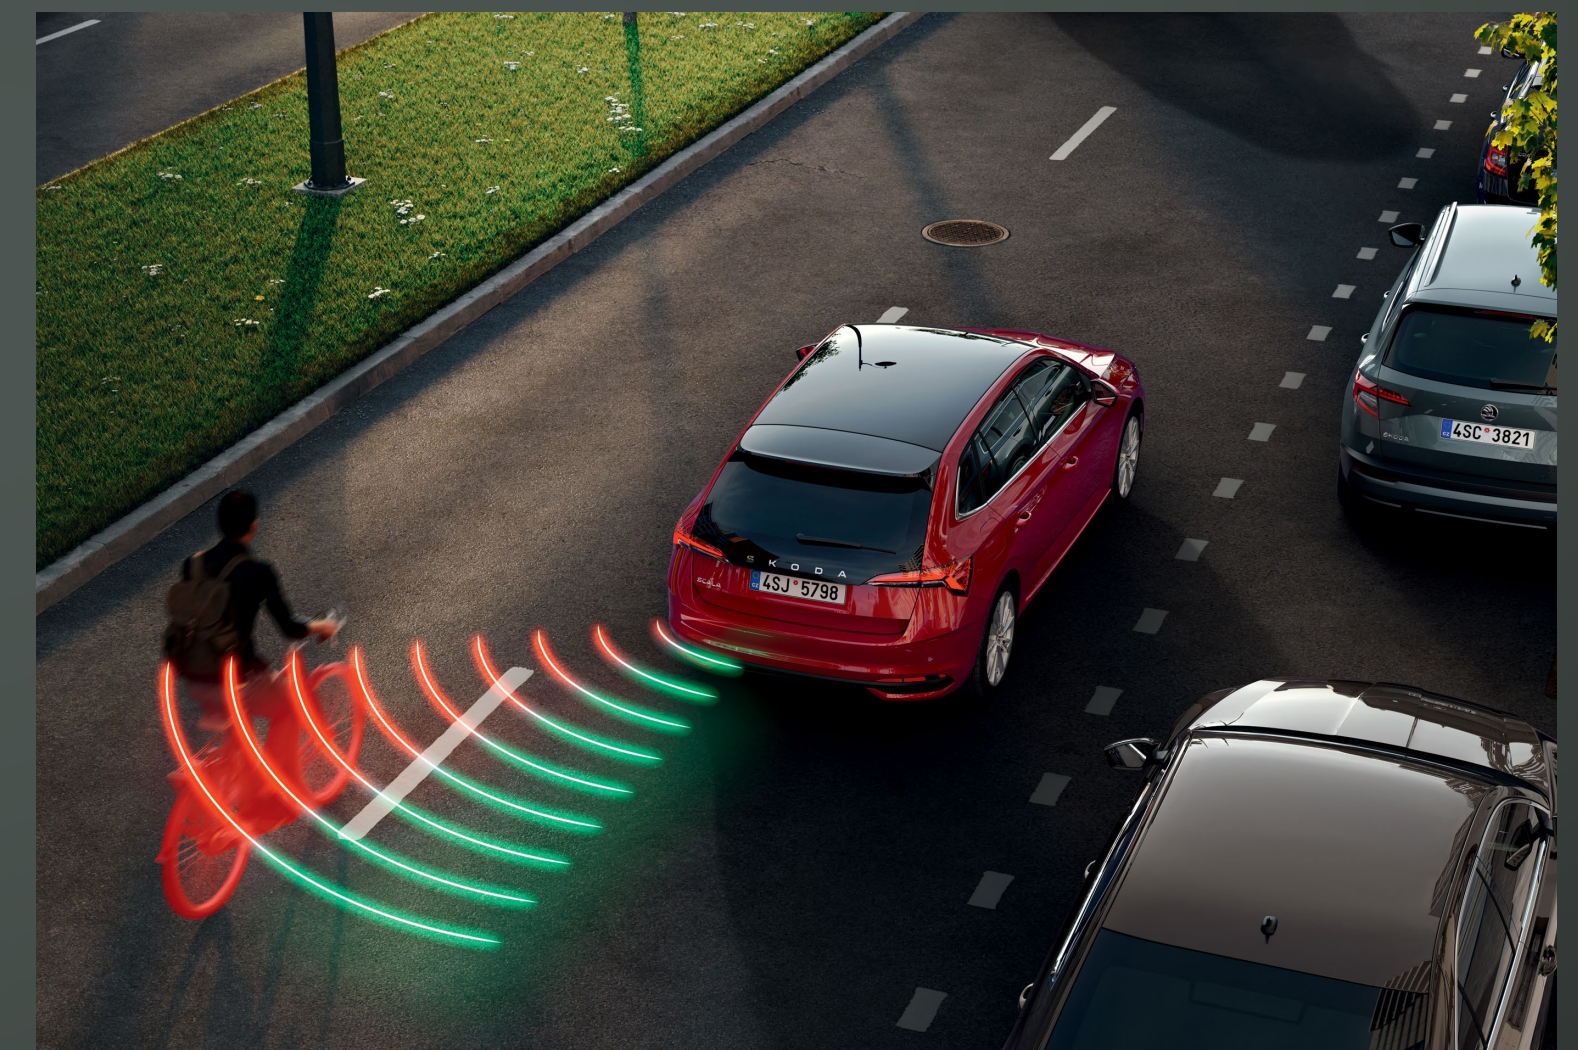

Predictive Adaptive Cruise Control

Predictive Adaptive Cruise Control works with a navigation system, which has the speed limits as well as the boundaries of built-up areas stored in its map data. The multifunction camera recognises traffic signs.

Adaptive Lane Assist

Adaptive Lane Assist performs subtle steering interventions as and when required to help the driver keep their Škoda safely in its chosen lane.

Side Assist

Side Assist detects vehicles that are approaching the car from behind or are located in its blind spot, up to a distance of 70 metres.
